

**The Ultimate in European Waterborne Refinishing Technology and Value.**

**For Over a Decade...**

waterborne coatings have been successfully used in the European Union. Years of extensive research, applications and scientific advances resulted in next generation technology. Enter today's waterborne. Pro-Spray® H2O European Waterborne Basecoat System. Future-minded and performance driven basecoats saturated in colour.

# Pro-Spray H<sub>2</sub>O Waterborne Basecoat System

Primers   Clears   Binders   Toners   Solids   Metallics   Pearls   Xirallics

**The Technology behind Waterborne...**

is fairly straightforward. Traditional solvent-borne coatings disperse pigments in organic solvents. Pro-Spray® H2O European Waterborne Basecoats disperse pigments in a water-based solution. Our toners have the highest pigment, metallic and pearl concentrations available.

**Brilliant Colours and Invisible Blends...**

because Pro-Spray® H2O Basecoats have higher pigment concentrations, less is more. The colour is true and the coverage is amazing. Shops using Pro-Spray® H2O report precise colour match, superior hide and a smooth, even appearance.

**Improved Cycle Times...**

are possible with proper airflow. Temperature and humidity often determine dry times for waterborne basecoats because, after spraying, a layer of water vapor remains on the surface. With additional airflow, flash times can be reduced and production increased.

**Our Pro-Spray® H2O System...**

is a fully compliant, stand alone, compact basecoat colour system designed for vehicle refinishing. H2O's premium European formulation and technology delivers solid, metallic, pearl and xirallic basecoat colours that are easy-to-use and simple to blend while providing excellent colour match and metallic orientation for the invisible repair. No special mix bank equipment is needed and mixing is easy; simply shake and pour.

**Helping you Through the Transition...**

Do you have concerns about changing to waterborne? Confused about the equipment? Wondering about your profitability? Shops around the world have successfully transitioned to Pro-Spray® H2O. They love the finish. They love the colour and speed. They love the profitability. Whether we provide training at your location, or you visit our state-of-the-art, technical training center, we want to help you every step of the way.

**The Benefits are Undeniable and the Results are Beautiful...**

A symbiotic relationship can exist between refinishing and the environment. The changes will last a lifetime.

**Pro-Spray® H2O-The Art and Technology of Responsible Refinishing.**

**Future-minded,  
performance driven basecoats  
saturated in colour.**

THE *Art*  
AND Technology  
OF RESPONSIBLE REFINISHING

**Water.**  
A simple molecule.  
A dominant force in nature.  
Now, part of your  
refinishing system.

Welcome to Pro-Spray®  
H2O Premium European  
Waterborne Basecoat  
System. Where we've  
fused the art of colour  
and the sustainability of  
water to deliver brilliant  
solids, dynamic metallics,  
lustrous pearlescents and  
vibrant xirallics. Discover  
the European secret to a  
simply beautiful finish. A  
finish that provides precise  
colour, efficient coverage,  
invisible blends and  
increased throughput.

Pro-Spray® H2O  
The Art and Technology  
of Responsible  
Refinishing.
