

Pro-Spray Automotive Finishes VOC Chart

All data contained in this chart represents package V.O.C. (Volatile Organic Compound content). Depending on the requirements of the regulatory body, one or more of these sets of data would be requested. The **"Total Organic Volatiles"** entry represents total weight of volatiles (including exempt solvents) per unit volume (including exempt solvents). Water is not included in this calculation. The **"Regulatory VOC Less Exempt"** represents the weight of volatiles minus water and exempt solvents per unit volume minus water and exempt solvents. (Frequently this entry is referred to as VOC less water and exempts.) The **"Actual VOC"** entry represents the weight of the volatiles minus water and exempts per unit volume, which includes water and exempt solvents. (Frequently this entry is referred to as VOC, as calculated by Rule 1171.) Regulating bodies may ask for one or several of these items. Make sure that you are generating the specific type of data requested. **This chart is revised periodically.** To obtain the most accurate values check for updates on a regular basis.

Code	Description	Formula % solids by weight (non-volatiles)	Density	Weight per gallon	% Total Exempts Total exempts, water, methyl acetate, acetone, PCBTF.	LE		AP

Pro-Spray Automotive Finishes VOC Chart

All data contained in this chart represents package V.O.C. (Volatile Organic Compound content). Depending on the requirements of the regulatory body, one or more of these sets of data would be requested. The **"Total Organic Volatiles"** entry represents total weight of volatiles (including exempt solvents) per unit volume (including exempt solvents). Water is not included in this calculation. The **"Regulatory VOC Less Exempt"** represents the weight of volatiles minus water and exempt solvents per unit volume minus water and exempt solvents. (Frequently this entry is referred to as VOC less water and exempts.) The **"Actual VOC"** entry represents the weight of the volatiles minus water and exempts per unit volume, which includes water and exempt solvents. (Frequently this entry is referred to as VOC, as calculated by Rule 117.1.) Regulating bodies may ask for one or several of these items. Make sure that you are generating the specific type of data requested. **This chart is revised periodically.** To obtain the most accurate values check for updates on a regular basis.

Code	Description	Formula % solids by weight (non-volatiles)	Density	Weight per gallon	% Total Exempts <small>Total exempts, water, methyl acetate, acetone, PCBTF.</small>	LE				AP	
						Total (material) VOC, as packaged, everything included		Regulatory (coating) VOC. Weight of volatiles less water & exempt solvent per volume which excludes water and exempts		Actual VOC, weight of volatiles less water and exempts per volume which includes water & exempts

Pro-Spray Automotive Finishes VOC Chart

All data contained in this chart represents package V.O.C. (Volatile Organic Compound content). Depending on the requirements of the regulatory body, one or more of these sets of data would be requested. The "Total Organic Volatiles" entry represents total weight of volatiles (including exempt solvents) per unit volume (including exempt solvents). Water is not included in this calculation. The "Regulatory VOC Less Exempt" represents the weight of volatiles minus water and exempt solvents per unit volume minus water and exempt solvents. (Frequently this entry is referred to as VOC less water and exempts.) The "Actual VOC" entry represents the weight of the volatiles minus water and exempts per unit volume, which includes water and exempt solvents. (Frequently this entry is referred to as VOC, as calculated by Rule 1171.) Regulating bodies may ask for one or several of these items. Make sure that you are generating the specific type of data requested. **This chart is revised periodically.** To obtain the most accurate values check for updates on a regular basis.

Pro-Spray Automotive Finishes VOC Chart

All data contained in this chart represents package V.O.C. (Volatile Organic Compound content). Depending on the requirements of the regulatory body, one or more of these sets of data would be requested. The **Total Organic Volatiles** entry represents total weight of volatiles (including exempt solvents) per unit volume (including exempt solvents). Water is not included in this calculation. The **Regulatory VOC Less Exempt** represents the weight of volatiles minus water and exempt solvents per unit volume minus water and exempt solvents. (Frequently this entry is referred to as VOC less water and exempts.) The **Actual VOC** entry represents the weight of the volatiles minus water and exempts per unit volume, which includes water and exempt solvents. (Frequently this entry is referred to as VOC, as calculated by Rule 1171.) Regulating bodies may ask for one or several of these items. Make sure that you are generating the specific type of data requested. **This chart is revised periodically.** To obtain the most accurate values check for updates on a regular basis.
